

Certificate of Analysis

Product Name: Endothelin 3 (human, rat)

Catalog No.: 1162

Batch No.: 21

CAS Number: 117399-93-6

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula:	C ₁₂₁ H ₁₆₈ N ₂₆ O ₃₃ S ₄
Batch Molecular Weight:	2643
Physical Appearance:	White lyophilised solid
Counter Ion:	Trifluoroacetate
Solubility:	Soluble to 1 mg/ml in water
Storage:	Store at -20°C
Peptide Sequence:	<div style="border: 1px solid black; padding: 5px; display: inline-block;"> <p>Cys-Thr-Cys-Phe-Thr-Tyr-Lys-Asp-Lys-Glu- Cys-Val-Tyr-Tyr-Cys-His-Leu-Asp-Ile-Ile-Trp</p> </div>

2. ANALYTICAL DATA

HPLC:	Shows 97.6% purity
Mass Spectrum:	Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid Theoretical Actual			Amino Acid Theoretical Actual		
Ala			Lys	2.00	2.07
Arg			Met		
Asx	2.00	2.04	Phe	1.00	1.03
Cys	4.00	1.76	Pro		
Glx	1.00	1.05	Ser		
Gly			Thr	2.00	1.52
His	1.00	1.00	Trp	1.00	0.03
Ile	2.00	1.69	Tyr	3.00	2.77
Leu	1.00	1.04	Val	1.00	1.01

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

Product Name: Endothelin 3 (human, rat)

Catalog No.: 1162

Batch No.: 21

CAS Number: 117399-93-6

Description:

Endothelin 3 (human, rat) is an endogenous neuropeptide and potent vasoconstrictor. Displays selectivity for the putative ET_C endothelin receptor.

Physical and Chemical Properties:

Batch Molecular Formula: C₁₂₁H₁₆₈N₂₆O₃₃S₄

Batch Molecular Weight: 2643

Physical Appearance: White lyophilised solid

Peptide Sequence:

Storage: Store at -20°C

Solubility & Usage Info:

Soluble to 1 mg/ml in water

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: Trifluoroacetate

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
