Description:

MNI-caged-L-glutamate is a form of glutamate linked to a photo-protecting group, 4-methoxy-7-nitroindolyl (MNI); it rapidly and efficiently releases L-glutamate (Cat. No. 0218) by photolysis (300 - 380 nm excitation) with a quantum yield in the 0.065-0.085 range. It is also suitable for use with two-photon uncaging microscopy (cross-section of 0.06 GM at 730 nm). MNI-caged-L-glutamate is optically compatible with other chromophores used for fluorescence imaging, such as GFP, YFP and most Ca²⁺ dyes. MNI-caged-L-glutamate is 2.5-fold more efficient at releasing L-glutamate than NI-caged L-glutamate. MNI-caged-L-glutamate is water-soluble, st... Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
