Description:

(R)-(+)-Bay K 8644 is a L-type Ca²⁺-channel blocker with negative inotropic and vasodilatory effects in vivo. Enantiomer showing opposite effects to the racemate (±)-Bay K 8644 (Cat. No. 1544) and (S)-(-)- enantiomer (Cat. No. 1546). Also TMEM176B inhibitor. Induces IL-1β secretion and caspase-1 activation in bone marrow-derived dendritic cells in vitro and increases survival of tumor-bearing mice, both alone and in combination with immune checkpoint blockers. Racemate and (S)-(-)-Enantiomer also available.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
