

Certificate of Analysis

www.tocris.com

Product Name: BIM 23056

Catalog No.: 1844

Batch No.: 4

CAS Number: 150155-61-6

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula:	C ₇₁ H ₈₁ N ₁₁ O ₉
Batch Molecular Weight:	1232.49
Physical Appearance:	White lyophilised solid
Net Peptide Content:	65%
Counter Ion:	TFA
Solubility:	Soluble to 1 mg/ml in 20% acetonitrile / water
Storage:	Desiccate at -20°C
Peptide Sequence:	D-Phe-Phe-Tyr-D-Trp-Lys-Val-Phe-D-Nal-NH ₂

2. ANALYTICAL DATA

HPLC:	Shows 99% purity
Mass Spectrum:	Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid	Theoretical	Actual	Amino Acid	Theoretical	Actual
Ala			Lys	1.00	0.96
Arg			Met		
Asx			Phe	3.00	3.02
Cys			Pro		
Glx			Ser		
Gly			Thr		
His			Trp		
Ile			Tyr	1.00	1.08
Leu			Val	1.00	0.95

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

Product Name: BIM 23056**Catalog No.:** 1844**Batch No.:** 4

CAS Number: 150155-61-6

Description:

Somatostatin receptor ligand (K_i values are 142, > 1000, 10.8, 16.6 and 5.7 nM for human cloned sst_{1-5} receptors respectively). Behaves as an antagonist on SRIF14-induced [³⁵S]-GTPγS binding at sst_3 and sst_5 receptors (PK_B values are 6.33 and 5.84 respectively).

Physical and Chemical Properties:Batch Molecular Formula: C₇₁H₈₁N₁₁O₉

Batch Molecular Weight: 1232.49

Physical Appearance: White lyophilised solid

Peptide Sequence:D-Phe-Phe-Tyr-D-Trp-Lys-Val-Phe-D-Nal-NH₂**Storage:** Desiccate at -20°C**Solubility & Usage Info:**

Soluble to 1 mg/ml in 20% acetonitrile / water

This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 65% (Remaining weight made up of counterions and residual water).**Counter Ion:** TFA**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μm filter to remove potential bacterial contamination whenever possible.
