Product Name: Amyloid β-Peptide (10-20) (human)  
Catalog No.: 1892  
Batch No.: 1  
CAS Number: 152286-31-2

1. PHYSICAL AND CHEMICAL PROPERTIES

- Batch Molecular Formula: C₁₇₁H₁₉₉N₁₇O₁₆
- Batch Molecular Weight: 1446.67
- Physical Appearance: White lyophilised solid
- Net Peptide Content: 70%
- Solubility: Soluble to 1 mg/ml in water
- Storage: Desiccate at -20°C
- Peptide Sequence: Tyr-Glu-Val-His-His-Gln-Lys-Leu-Val-Phe-Phe

2. ANALYTICAL DATA

- HPLC: Shows >95% purity

3. AMINO ACID ANALYSIS DATA

Product Name: Amyloid β-Peptide (10-20) (human)

CAS Number: 152286-31-2

Catalog No.: 1892  Batch No.: 1

Description:
Soluble amyloid β-peptide fragment that is a substrate for gelatinase A/type IV collagenase/MMP-2 and APP secretase; cleaved between Lys16 and Leu17.

Physical and Chemical Properties:
Batch Molecular Formula: C₁₁₁H₁₅₅N₁₁₇O₁₆
Batch Molecular Weight: 1446.67
Physical Appearance: White lyophilised solid

Peptide Sequence:
Tyr-Glu-Val-His-His-Val-Lys-Leu-Val-Phe-Phe

Storage: Desiccate at -20°C

Solubility & Usage Info:
Soluble to 1 mg/ml in water
This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 70% (Remaining weight made up of counterions and residual water).

Stability and Solubility Advice:
Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μm filter to remove potential bacterial contamination whenever possible.
