

Certificate of Analysis

www.tocris.com

Product Name: Neuromedin B (porcine)

Catalog No.: 1908

Batch No.: 10

CAS Number: 87096-84-2

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₅₂H₇₃N₁₅O₁₂S
Batch Molecular Weight: 1132.3
Physical Appearance: White lyophilised solid
Counter Ion: TFA
Solubility: Soluble to 1 mg/ml in water
Storage: Store at -20°C
Peptide Sequence: Gly-Asn-Leu-Trp-Ala-Thr-Gly-His-Phe-Met-NH₂

2. ANALYTICAL DATA

HPLC: Shows 98.0% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid		Theoretical	Actual	Amino Acid		Theoretical	Actual
Ala	1.00	1.00	Lys				
Arg			Met	1.00	1.00		
Asx	1.00	0.99	Phe	1.00	0.98		
Cys			Pro				
Glx			Ser				
Gly	2.00	2.02	Thr	1.00	1.02		
His	1.00	0.99	Trp	1.00	Detected		
Ile			Tyr				
Leu	1.00	1.04	Val

Product Name: Neuromedin B (porcine)**Catalog No.:** 1908**10**

CAS Number: 87096-84-2

Description:

Neuromedin B (porcine) is a mammalian bombesin-like peptide and endogenous ligand for the neuromedin B receptor (IC₅₀ = 2 nM); first isolated from pig spinal cord. Regulates endocrine and exocrine secretion, smooth muscle contraction, blood pressure, feeding and cell growth.

Physical and Chemical Properties:Batch Molecular Formula: C₅₂H₇₃N₁₅O₁₂S

Batch Molecular Weight: 1132.3

Physical Appearance: White lyophilised solid

Peptide Sequence:Gly-Asn-Leu-Trp-Ala-Thr-Gly-His-Phe-Met-NH₂**Storage:** Store at -20°C**Solubility & Usage Info:**

Soluble to 1 mg/ml in water

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: TFA**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
