

Certificate of Analysis

www.tocris.com

Product Name: JMV 449
CAS Number: 139026-66-7

Catalog No.: 1998 **Batch No.:** 9

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₃₈H₆₆N₈O₇
Batch Molecular Weight: 746.96
Physical Appearance: White lyophilised solid
Counter Ion: Acetate
Solubility: Soluble to 0.80 mg/ml in water
Storage: Store at -20°C
Peptide Sequence: Lys(Ψ(CH₂-NH))-Lys-Pro-Tyr-Ile-Leu

2. ANALYTICAL DATA

HPLC: Shows 99.7% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid		Theoretical	Actual	Amino Acid		Theoretical	Actual
Ala				Lys	2.00		Detected
Arg				Met			
Asx				Phe			
Cys				Pro	1.00		0.99
Glx				Ser			
Gly				Thr			
His				Trp			
Ile	1.00		1.01	Tyr	1.00		1.01
Leu	1.00		0.99	Val

Product Name: JMV 449**Catalog No.:** 1998**9**

CAS Number: 139026-66-7

Description:

JMV 449 is a potent, metabolically stable neurotensin receptor agonist peptide (IC₅₀ = 0.15 nM for inhibition of [¹²⁵I]-NT binding to neonatal mouse brain; EC₅₀ = 1.9 nM for contraction of guinea pig ileum). Produces long-lasting hypothermic, neuroprotective and analgesic effects in mice following central administration in vivo.

Physical and Chemical Properties:Batch Molecular Formula: C₃₈H₆₆N₈O₇

Batch Molecular Weight: 746.96

Physical Appearance: White lyophilised solid

Peptide Sequence:Lys(Ψ(CH₂-NH))-Lys-Pro-Tyr-Ile-Leu**Storage:** Store at -20°C**Solubility & Usage Info:**

Soluble to 0.80 mg/ml in water

This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: Acetate**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
