1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: \( \text{C}_{120}\text{H}_{206}\text{N}_{44}\text{O}_{35}\text{S} \)
Batch Molecular Weight: 2857.28
Physical Appearance: White lyophilised solid
Net Peptide Content: 86%
Counter Ion: HCl
Solubility: Soluble to 0.30 mg/ml in water
Storage: Desiccate at -20°C

2. ANALYTICAL DATA

HPLC: Shows 97% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use
Product Name: [Ala^{11}, D-Leu^{15}]-Orexin B
CAS Number: 532932-99-3

Description:
Highly potent and selective OX₂ receptor agonist; displays 400-fold selectivity over OX₁ receptors. EC<sub>50</sub> values are 0.13 and 52 nM for human OX₂ and OX₁ receptors respectively.

Physical and Chemical Properties:
Batch Molecular Formula: C₁₂₀H₂₀₀N₄₄O₃₅S
Batch Molecular Weight: 2857.28
Physical Appearance: White lyophilised solid

Peptide Sequence:

Storage: Desiccate at -20°C

Solubility & Usage Info:
Soluble to 0.30 mg/ml in water
This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 86% (Remaining weight made up of counterions and residual water).

Counter Ion: HCl

Stability and Solubility Advice:
Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met, Trp, Asn, Gin, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μm filter to remove potential bacterial contamination whenever possible.
