Product Name: PKI 14-22 amide, myristoylated

Catalog No.: 2546

Batch No.: 11

CAS Number: 201422-03-9

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₅₃H₁₀₀N₂₀O₁₂
Batch Molecular Weight: 1209.5
Physical Appearance: White solid
Counter Ion: Trifluoroacetic Acid
Solubility: Soluble to 1 mg/ml in DMSO
Storage: Store at -20°C
Peptide Sequence: Myr-Gly-Arg-Thr-Gly-Arg-Arg-Asn-Ala-Ile-NH₂

2. ANALYTICAL DATA

HPLC: Shows 99.2% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid Theoretical Actual			Amino Acid Theoretical Actual		
Ala	1.00	1.01	Lys		
Arg	3.00	3.02	Met		
Asx	1.00	1.07	Phe		
Cys			Pro		
Glx			Ser		
Gly	2.00	1.90	Thr	1.00	1.01
His			Trp		
Ile	1.00	0.98	Tyr		
Leu			Val

Product Name: PKI 14-22 amide, myristoylated

Catalog No.: 2546

Batch No.: 11

CAS Number: 201422-03-9

Description:

PKI 14-22 amide, myristoylated is a cell-permeable version of protein kinase inhibitor PKI (14-22) amide. The non-myristoylated version inhibits protein kinase A ($K_i = 36$ nM), inhibits cell growth and induces apoptosis in human pancreatic cancer cells (PANC-1).

Physical and Chemical Properties:

Batch Molecular Formula: $C_{53}H_{100}N_{20}O_{12}$

Batch Molecular Weight: 1209.5

Physical Appearance: White solid

Peptide Sequence:

Myr-Gly-Arg-Thr-Gly-Arg-Arg-Asn-Ala-Ile-NH₂

Storage: Store at -20°C

Solubility & Usage Info:

Soluble to 1 mg/ml in DMSO

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: Trifluoroacetic Acid

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
