**Product Name:** Withaferin A

**Catalog No.:** 2816

**Batch No.:** 4

CAS Number: 5119-48-2

IUPAC Name: (4 $\beta$ ,5 $\beta$ ,6 $\beta$ ,22*R*)-5,6-Epoxy-4,22,27-trihydroxy-1-oxoergosta-2,24-dien-26-oic acid  $\delta$ -lactone

**Description:**

Withaferin A is a steroid lactone that displays anti-inflammatory, antitumor and antiangiogenic activity. Withaferin A inhibits endothelial cells (HUVEC) sprouting in vitro ( $IC_{50}$  = 12 nM) and in vivo, prevents NF- $\kappa$ B activation by inhibiting activation of IKK $\beta$  and inhibits chymotrypsin-like activity of the 20S proteasome. In an animal model of Huntington's disease (HD), Withaferin A delays disease progression and increases lifespan; in a cellular model it suppresses aggregation of mutant huntingtin, activates HSF1 and induces Hsp70 chaperone expression.

ethanol to 5 mM

This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

**SOLIDS:** Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

**SOLUTIONS:** We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
