Description:

PSB 603 is an adenosine A_{2B} receptor antagonist that displays > 17000-fold selectivity over other adenosine receptors (K_i values are 0.553, > 10000, > 10000 and > 10000 nM for A_{2B}, A₁, A_{2A} and A₃ receptors respectively). Downregulates the expression of osteocalcin and osteopontin during osteogenic differentiation of mesenchymal stem cells.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
