1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: \( \text{C}_{81}\text{H}_{113}\text{N}_{19}\text{O}_{19}\text{S}_{2} \)

Batch Molecular Weight: 1721.03

Physical Appearance: White lyophilised solid

Net Peptide Content: 75%

Counter Ion: Trifluoroacetate

Solubility: Soluble to 0.70 mg/ml in water

Storage: Desiccate at -20°C

Peptide Sequence: Pro-Cys-Lys-Asn-Phe-Phe-Trp-Lys-Thr-Phe-

Scr-Scr-Cys-Lys

2. ANALYTICAL DATA

HPLC: Shows 97.70% purity

Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Description:
Endogenous neuropeptide, mainly expressed in the cortex and hippocampus, that has structural and functional similarities to somatostatin-14. Displays potency at all somatostatin receptors (sstr_1 - sstr_5) and prevents somatostatin-14 binding (IC50 values are 5, 0.09, 0.3, 0.2 and 0.3 nM at sstr_1, sstr_2, sstr_3, sstr_4 and sstr_5 receptors respectively). Also binds to the growth hormone secretagogue receptor (GHS-R1a). Exhibits neuronal depressant and sleep-modulating properties in vivo. Also potent MRGPRX2 agonist.

Physical and Chemical Properties:
Batch Molecular Formula: C_{81}H_{139}N_{19}O_{19}S_{2}
Batch Molecular Weight: 1721.03
Physical Appearance: White lyophilised solid

Peptide Sequence:
Pro-Cys-Lys-Asn-Phe-Phe-Trp-Lys-Thr-Phe-
Ser-Ser-Cys-Lys

Storage: Desiccate at -20°C

Solubility & Usage Info:
Soluble to 0.70 mg/ml in water
This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 75% (Remaining weight made up of counterions and residual water).

Counter Ion: Trifluoroacetate

Stability and Solubility Advice:
Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).
Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met, Trp, Asn, Gln, and N-terminal Glu.
Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.
Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μm filter to remove potential bacterial contamination whenever possible.
