

Certificate of Analysis

www.tocris.com

Product Name: TRAP-6
CAS Number: 141136-83-6

Catalog No.: 3497 **Batch No.:** 8

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₃₄H₅₆N₁₀O₉
Batch Molecular Weight: 748.88
Physical Appearance: White lyophilised solid
Net Peptide Content: 73.7%
Counter Ion: TFA
Solubility: Soluble to 1 mg/ml in water
Storage: Desiccate at -20°C
Peptide Sequence: Ser-Phe-Leu-Leu-Arg-Asn

2. ANALYTICAL DATA

HPLC: Shows 99% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

| Amino Acid | | Theoretical | Actual | Amino Acid | | Theoretical | Actual |
|------------|------|-------------|--------|------------|------|-------------|--------|
| Ala | | | | Lys | | | |
| Arg | 1.00 | 0.99 | Met | | | | |
| Asx | 1.00 | 1.09 | Phe | 1.00 | 0.99 | | |
| Cys | | | Pro | | | | |
| Glx | | | Ser | 1.00 | 0.77 | | |
| Gly | | | Thr | | | | |
| His | | | Trp | | | | |
| Ile | | | Tyr | | | | |
| Leu | 2.00 | 1.93 | Val | | | | |

Product Name: TRAP-6
CAS Number: 141136-83-6**Catalog No.:** 3497 **Batch No.:** 8**Description:**

Peptide fragment (residues 42-47) of protease-activated receptor 1 (PAR₁) that acts as a PAR₁ agonist. Stimulates platelet aggregation (EC₅₀ = 0.8 μM), promotes intracellular Ca²⁺ mobilization and induces rapid phosphodiesterase 3A (PDE3A) phosphorylation in vitro.

Physical and Chemical Properties:

Batch Molecular Formula: C₃₄H₅₆N₁₀O₉
Batch Molecular Weight: 748.88
Physical Appearance: White lyophilised solid

Peptide Sequence:

Ser-Phe-Leu-Leu-Arg-Asn

Storage: Desiccate at -20°C**Solubility & Usage Info:**

Soluble to 1 mg/ml in water
This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 73.7% (Remaining weight made up of counterions and residual water).**Counter Ion:** TFA**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μm filter to remove potential bacterial contamination whenever possible.
