

Certificate of Analysis

www.tocris.com

Product Name: Decanoyl-RVKR-CMK

Catalog No.: 3501

Batch No.: 10

CAS Number: 150113-99-8

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₃₄H₆₆ClN₁₁O₅
Batch Molecular Weight: 744.42
Physical Appearance: White lyophilised solid
Counter Ion: TFA
Solubility: Soluble to 1 mg/ml in water
Storage: Store at -20°C
Peptide Sequence: Decanoyl-Arg-Val-Lys-Arg-CMK

2. ANALYTICAL DATA

HPLC: Shows 97.6% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid		Theoretical	Actual	Amino Acid		Theoretical	Actual
Ala				Lys	1.00	0.98	
Arg	1.00	1.03	Met				
Asx			Phe				
Cys			Pro				
Glx			Ser				
Gly			Thr				
His			Trp				
Ile			Tyr				
Leu			Val	1.00	0.99		

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

Product Name: Decanoyl-RVKR-CMK

Catalog No.: 3501

Batch No.: 10

CAS Number: 150113-99-8

Description:

Decanoyl-RVKR-CMK is a subtilisin/Kex2p-like proprotein convertase inhibitor; blocks activity of all seven convertases (PC1, PC2, PC4, PACE4, PC5, PC7 and furin). Abolishes proET-1 processing in endothelial cells; inhibits regulated secretion of the neuronal polypeptide VGF in PC12 cells. Inhibits cleavage of glycoprotein B of human cytomegalovirus. Also inhibits cleavage of SARS-CoV-2 spike protein by furin and blocks viral cell entry (IC₅₀ = 57 nM in plaque reduction assay).

Physical and Chemical Properties:

Batch Molecular Formula: C₃₄H₆₆ClN₁₁O₅

Batch Molecular Weight: 744.42

Physical Appearance: White lyophilised solid

Peptide Sequence:

Decanoyl-Arg-Val-Lys-Arg-CMK

Storage: Store at -20°C

Solubility & Usage Info:

Soluble to 1 mg/ml in water

This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Counter Ion: TFA

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
