**Solubility & Usage Info:**
Solveable in ethanol (supplied pre-dissolved in anhydrous ethanol, 10mg/ml)

This compound is supplied pre-dissolved in ethanol (10mg/ml). To change the solvent, evaporate the ethanol under a gentle stream of nitrogen and immediately add the chosen solvent (preferably purged with nitrogen beforehand). The solubility of Travaprost is greater than 25mM in DMSO. This stock solution can be further diluted in aqueous buffers. We do not recommend storing aqueous solutions for more than a day.

**Stability and Solubility Advice:**
Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:
- **SOLIDS:** Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.
- **SOLUTIONS:** We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
