Description:

Key information: Hoechst 33342 is a blue-fluorescent dye for DNA staining. Cell permeable. Suitable for fixed and live-cell staining. Commonly used as a counterstain in fluorescence microscopy. Used for: nuclear counterstain, DNA visualization, cell cycle studies, apoptosis analysis. Application: flow cytometry, confocal microscopy. Properties and Photophysical Data: Hoechst 33342 binds to the AT-rich regions of the minor groove in DNA which renders it specific for nuclear chromatin. Excitation and emission maxima (λ) are 350 nm and 461 nm, respectively.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a $45-60^{\circ}C$ water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at $-20^{\circ}C$ or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
