

Certificate of Analysis

Product Name: PMX 53
CAS Number: 219639-75-5

Catalog No.: 5473 **Batch No.:** 5

1. PHYSICAL AND CHEMICAL PROPERTIES

Batch Molecular Formula: C₄₇H₆₅N₁₁O₇
Batch Molecular Weight: 896.1
Physical Appearance: White lyophilised solid
Net Peptide Content: 80%
Counter Ion: TFA
Solubility: Soluble to 2 mg/ml in water
Storage: Store at -20°C
Peptide Sequence: Ac-Phe-cyclo(Orn-Pro-D-Cha-Trp-Arg)

2. ANALYTICAL DATA

HPLC: Shows 99% purity
Mass Spectrum: Consistent with structure

3. AMINO ACID ANALYSIS DATA

Amino Acid Theoretical		Actual		Amino Acid Theoretical		Actual	
Ala				Lys			
Arg	1.00	1.02	Met				
Asx			Phe	1.00	0.96		
Cys			Pro	1.00	1.02		
Glx			Ser				
Gly			Thr				
His			Trp	1.00	Detected		
Ile			Tyr				
Leu			Val				

Caution - Not Fully Tested • Research Use Only • Not For Human or Veterinary Use

Product Name: PMX 53**Catalog No.:** 5473**5**

CAS Number: 219639-75-5

Description:

PMX 53 is a potent C5a receptor antagonist (IC₅₀ = 20 nM). Also MrgX2 agonist. Stimulates MrgX2-mediated mast cell degranulation. Also inhibits C5a-induced hypernociception in rats, inhibits lung metastasis in a mouse breast cancer model and reduces atherosclerotic lesions in a mouse model of atherosclerosis. Negative Control also available.

Physical and Chemical Properties:Batch Molecular Formula: C₄₇H₆₅N₁₁O₇

Batch Molecular Weight: 896.1

Physical Appearance: White lyophilised solid

Peptide Sequence:**Ac-Phe-cyclo(Orn-Pro-D-Cha-Trp-Arg)****Storage:** Store at -20°C**Solubility & Usage Info:**

Soluble to 2 mg/ml in water

This product is supplied in lyophilized form. It may appear as a solid, gel or film and be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 80% (Remaining weight made up of counterions and residual water).**Counter Ion:** TFA**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 µm filter to remove potential bacterial contamination whenever possible.
