Description:

PDPK1 (PDK1) inhibitor; inhibits Akt signaling. Induces apoptosis of PC-3 and medulloblastoma cells, and inhibits growth of a number of tumor cell lines. Sensitizes radiotherapy-induced cell death and enhances cytotoxic effects of chemotherapeutic agents in vitro. Attenuates tumor growth of medulloblastoma xenografts in mice.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
