**Product Name:** Cilengitide**Catalog No.:** 5870**Batch No.:** 3

CAS Number: 188968-51-6

**Description:**

Potent and selective inhibitor of integrins  $\alpha_v\beta_3$  and  $\alpha_v\beta_5$  ( $IC_{50}$  values are 4.1 and 70 nM, respectively). Exhibits ~10-fold selectivity over gpIIb/IIIa. Increases endothelial monolayer permeability. Also exhibits antiangiogenic activity.

**Physical and Chemical Properties:**Batch Molecular Formula:  $C_{27}H_{40}N_8O_7$ 

Batch Molecular Weight: 588.66

Physical Appearance: White solid

**Peptide Sequence:**

cyclo(Arg-Gly-Asp-D-Phe-NMe-Val)

**Storage:** Store at -20°C**Solubility & Usage Info:**

Soluble to 10 mg/ml in water

**Net Peptide Content:** 88% (Remaining weight made up of counterions and residual water).**Stability and Solubility Advice:**

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2  $\mu$ m filter to remove potential bacterial contamination whenever possible.
