1. PHYSICAL AND CHEMICAL PROPERTIES

- **Batch Molecular Formula:** C₁₉H₃₇N₅O₅
- **Batch Molecular Weight:** 415.54
- **Physical Appearance:** White lyophilised solid
- **Net Peptide Content:** 66.7%
- **Counter Ion:** TFA
- **Solubility:** Soluble to 5 mg/ml in water
- **Storage:** Store at -20°C
- **Peptide Sequence:**

![Peptide Structure](image)

2. ANALYTICAL DATA

- **HPLC:** Shows 99.5% purity
- **Mass Spectrum:** Consistent with structure
**Product Information**

**Product Name:** TAPI 2  
**Catalog No.:** 6013  
**Batch No.:** 2

**CAS Number:** 689284-12-6  
**IUPAC Name:** \(N\)-\((2R)-2-[2-(Hydroxyamino)-2-oxoethyl]-4-methyl-1-oxopentyl]-3-methyl-L-valyl-\(N\)-(2-aminoethyl)-L-alaninamide

**Description:**
ADAM-17 (TACE) and MMP inhibitor \((K_i = 120 \text{ nM at ADAM-17})\).
Sensitizes cancer stem cells to the lethal effects of 5-FU in vitro.
Blocks shedding of TNF-\(\alpha\) from cell membranes.

**Physical and Chemical Properties:**
- **Molecular Formula:** \(C_{19}H_{37}N_5O_5\)
- **Molecular Weight:** 415.54
- **Appearance:** White lyophilised solid

**Peptide Sequence:**

![Peptide Sequence Image]

**Storage:** Store at -20°C

**Solubility & Usage Info:**
Soluble to 5 mg/ml in water
Soluble to 5 mg/ml in ethanol
This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved. This product is supplied in gross weight.

**Net Peptide Content:** 66.7% (Remaining weight made up of counterions and residual water).

**Counter Ion:** TFA

**Stability and Solubility Advice:**
Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).
Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such Cys, Met,Trp, Asn, Gln, and N-terminal Glu.
Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.
Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 \(\mu\)m filter to remove potential bacterial contamination whenever possible.
