Description:

PF 04671536 hydrochloride is a potent and selective PDE8B/8A inhibitor (IC₅₀ values are 1.3 and 1.9 nM, respectively). Exhibits selectivity for PDE8A/B over other PDEs (IC₅₀ values are >10 μM) and a range of other targets. Increases glucose-dependent insulin secretion from human pancreatic islet cells. Orally bioavailable.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. Our standard recommendations are:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
