Description:

ML 67-33 is a K_{2P} potassium channel activator (EC₅₀ values are 21.8 - 29.4 μM, 30.2 μM and 27.3 μM for K_{2P2.1} (TREK-1), K_{2P10.1} (TREK-2) and K_{2P4.1} (TRAAK) respectively, expressed in xenopus oocytes). Increases channel currents by activating core gating apparatus of channels. In a mouse migraine model, ML 67-33 improves pain symptoms via activation of TREK 1/2 currents in trigeminal ganglion sensory neurons.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
