Product Name: FAM-DEALAHypYIPMDDDFQLRSF

Catalog No.: 7452

Batch No.: 1

Description:

FAM-DEALAHypYIPMDDDFQLRSF is a 5,6-carboxyfluorescein (FAM) labeled HIF-1 α peptide. It binds with high affinity to von Hippel-Lindau (VHL) protein ($K_D = 3$ nM). Can be used to assess ligand binding to VHL in a direct fluorescence polarization (FP) displacement assay. Excitation/emission maxima (λ) = 485/520 nm. This product is a longer peptide version of FAM-DEALAHyp-YIPD (Cat. No. 7287).

Physical and Chemical Properties:

Batch Molecular Formula: C₁₂₂H₁₅₈N₂₄O₃₉S

Batch Molecular Weight: 2616.76

Physical Appearance: Yellow lyophilised solid

Peptide Sequence:

FAM-Asp-Glu-Ala-Leu-Ala-Hyp-Tyr-Ile-Pro-Met-Asp-Asp-Asp-Phe-Gln-Leu-Arg-Ser-Phe-NH₂

Storage: Store at -20°C

CAUTION - This product is light sensitive and we recommend that the solid material and any solutions obtained are protected from exposure to light.

Solubility & Usage Info:

Soluble to 1 mg/ml in PBS (pH 7.4)

This product is supplied as a lyophilized solid and may be very hard to visualize. Solutions should be made by adding solvent directly to the vial. The vial should then be vortexed vigorously to ensure the product has completely dissolved.

Net Peptide Content: 86% (Remaining weight made up of counterions and residual water).

Counter Ion: TFA

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Peptides in solution are much less stable than in lyophilized form. This is especially true for peptides whose sequences contain amino acids such as Cys, Met, Trp, Asn, Gln, and N-terminal Glu.

Therefore we recommend storing peptides in solution for as short a time as possible. Avoid repeated freeze thaw cycles by dividing the peptide solution into aliquots and storing the aliquots at -20°C. Any portion of an aliquot unused after thawing should be discarded.

Peptides stored in solution can occasionally be susceptible to bacterial degradation. We recommend using sterile solutions or passing the peptide solution through a 0.2 μ m filter to remove potential bacterial contamination whenever possible.
