Description:

(+)-JQ1 bump, acid functionalized is a BET bromodomain binding analog of (+)-JQ1 (Cat. No. 4499) that selectively binds single point mutant form of Brd4 (Brd4^{BD2 L387A}). Functionalized with a carboxylic acid group to enable onward chemistry. The position of the carboxylic acid group represents an 'exit vector' allowing modification without interfering with compound binding ability.

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a 45-60°C water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at -20°C or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
