Description:

DLin-MC3-DMA is an ionizable cationic lipid ($pK_a = 6.44$), used in combination with other lipids in the formation of lipid nanoparticles (LNPs) for delivering cargos such as oligonucleotides into living cells. DLin-MC3-DMA can protect negatively charged cargos and facilitate their cytosolic transport. This product is supplied pre-dissolved in anhydrous ethanol, 100mg/mL. For a fully formulated LNP containing DLin-MC3-DMA and a luciferase mRNA reporter, see MC3 LNP Luciferase (Cat. No. 8889). For more information on how to prepare MC3 lipid nanoparticles for RNA delivery, please see our protocol. Please see product specific page on www.tocris.com for full description.

This product is supplied dissolved in anhydrous ethanol at a concentration of 100mg/mL

Stability and Solubility Advice:

Some solutions can be difficult to obtain and can be encouraged by rapid stirring, sonication or gentle warming (in a $45-60^{\circ}C$ water bath).

Information concerning product stability, particularly in solution, has rarely been reported and in most cases we can only offer a general guide. *Unless contradicted by product-specific protocols or instructions, our standard recommendations apply:

SOLIDS: Provided storage is as stated on the product label and the vial is kept tightly sealed, the product can be stored for up to 6 months from date of receipt.

SOLUTIONS: We recommend that stock solutions, once prepared, are stored aliquoted in tightly sealed vials at $-20^{\circ}C$ or below and used within 1 month. Wherever possible solutions should be made up and used on the same day.
